

Copper(II) oxide Apollo Scientific

Part Number: IN1576 Version No: 1.1 Safety Data Sheet (Conforms to Annex II of REACH (1907/2006) - Regulation 2020/878) Chemwatch Hazard Alert Code: 0

Issue Date: 16/09/2022 Print Date: 31/07/2023 S.REACH.GBR.EN

SECTION 1 Identification of the substance / mixture and of the company / undertaking

1.1. Product Identifier

| Product name | Copper(II) oxide |
|----------------------------------|--|
| Chemical Name | copper(II) oxide |
| Synonyms | Not Available |
| Proper shipping name | ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S. |
| Chemical formula | CuO |
| Other means of identification | Not Available |
| CAS number | 1317-38-0 |
| EC number | 215-269-1 |
| Index number | 029-016-00-6 |

1.2. Relevant identified uses of the substance or mixture and uses advised against

| Relevant identified uses | Not Available | |
|--------------------------|--|--|
| Uses advised against | No specific uses advised against are identified. | |

1.3. Details of the manufacturer or supplier of the safety data sheet

| Registered company name | Apollo Scientific | |
|-------------------------|---|--|
| Address | Whitefield Road, Bredbury SK62QR United Kingdom | |
| Telephone | 01614060505 | |
| Fax | 0161 406 0506 | |
| Website | http://www.apolloscientific.co.uk/ | |
| Email | sales@apolloscientific.co.uk | |

1.4. Emergency telephone number

| Association / Organisation | Not Available |
|-----------------------------------|---------------|
| Emergency telephone numbers | Not Available |
| Other emergency telephone numbers | Not Available |

SECTION 2 Hazards identification

2.1. Classification of the substance or mixture

| Classification according to | H400 - Hazardous to the Aquatic Environment Acute Hazard Category 1, H410 - Hazardous to the Aquatic Environment |
|-----------------------------|--|
|-----------------------------|--|

| regulation (EC) No 1272/2008 [CLP] and amendments ^[1] | Long-Term Hazard Category 1 |
|---|--|
| Legend: | 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI |
| .2. Label elements | |
| Hazard pictogram(s) | |
| Signal word | Warning |
| | |
| lazard statement(s) | |
| | |
| H410 Supplementary statement | Very toxic to aquatic life with long lasting effects. |
| Supplementary statement Not Applicable Precautionary statement(| t(s) s) Prevention |
| Supplementary statement | t(s) |
| Supplementary statement Not Applicable Precautionary statement(P273 | t(s) s) Prevention Avoid release to the environment. |
| Supplementary statement Not Applicable Precautionary statement(P273 | t(s) s) Prevention Avoid release to the environment. |
| Supplementary statement Not Applicable Precautionary statement(P273 Precautionary statement(P391 Precautionary statement(| t(s) s) Prevention Avoid release to the environment. s) Response Collect spillage. |
| Supplementary statement Not Applicable Precautionary statement(P273 Precautionary statement(P391 Precautionary statement(Not Applicable | t(s) s) Prevention Avoid release to the environment. s) Response Collect spillage. s) Storage |
| Supplementary statement Not Applicable Precautionary statement(P273 Precautionary statement(| t(s) s) Prevention Avoid release to the environment. s) Response Collect spillage. s) Storage |

SECTION 3 Composition / information on ingredients

3.1.Substances

| 1. CAS No 2.EC No 3.Index No 4.REACH No | %[weight] | Name | Classification according to regulation (EC) No 1272/2008 [CLP] and amendments | SCL / M-Factor | Nanoform Particle Characteristics |
|--|-----------|---------------------|--|-------------------|--------------------------------------|
| Not Available | 100 | Copper(II) oxide | Not Applicable | Not Applicable | Not Available |

Legend: 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 3. Classification drawn from C&L; * EU IOELVs available; [e] Substance identified as having endocrine disrupting properties

3.2.Mixtures

See 'Information on ingredients' in section 3.1

SECTION 4 First aid measures

4.1. Description of first aid measures

| Eye Contact | If this product comes in contact with eyes: Wash out immediately with water. If irritation continues, seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. |
|-------------|--|
|-------------|--|

| Skin Contact | If skin or hair contact occurs: Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. |
|--------------|--|
| Inhalation | If fumes, aerosols or combustion products are inhaled remove from contaminated area. Other measures are usually unnecessary. |
| Ingestion | Immediately give a glass of water. First aid is not generally required. If in doubt, contact a Poisons Information Centre or a doctor. |

4.2 Most important symptoms and effects, both acute and delayed

See Section 11

4.3. Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

SECTION 5 Firefighting measures

5.1. Extinguishing media

- There is no restriction on the type of extinguisher which may be used.
- Use extinguishing media suitable for surrounding area.

5.2. Special hazards arising from the substrate or mixture

| Fire Incompatibility | None known. |
|----------------------|-------------|
|----------------------|-------------|

5.3. Advice for firefighters

| Fire Fighting | Alert Fire Brigade and tell them location and nature of hazard. Wear breathing apparatus plus protective gloves in the event of a fire. Prevent, by any means available, spillage from entering drains or water courses. Use fire fighting procedures suitable for surrounding area. DO NOT approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire. Equipment should be thoroughly decontaminated after use. |
|-----------------------|--|
| Fire/Explosion Hazard | Non combustible. Not considered a significant fire risk, however containers may burn. |

SECTION 6 Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

See section 8

6.2. Environmental precautions

See section 12

6.3. Methods and material for containment and cleaning up

| Minor Spills | Environmental hazard - contain spillage. Clean up all spills immediately. Avoid contact with skin and eyes. Wear impervious gloves and safety glasses. Use dry clean up procedures and avoid generating dust. Vacuum up (consider explosion-proof machines designed to be grounded during storage and use). Do NOT use air hoses for cleaning Place spilled material in clean, dry, sealable, labelled container. |
|--------------|--|
| Major Spills | Environmental hazard - contain spillage. Clear area of personnel and move upwind. Alert Fire Brigade and tell them location and nature of hazard. Control personal contact with the substance, by using protective equipment and dust respirator. Prevent spillage from entering drains, sewers or water courses. Avoid generating dust. Sweep, shovel up. Recover product wherever possible. |

Page 4 of 13

Copper(II) oxide

| Put residues in labelled plastic bags or other containers for disposal. If contamination of drains or waterways occurs, advise emergency services. |
|---|
| |

6.4. Reference to other sections

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

7.1. Precautions for safe handling

| | Limit all unnecessary personal contact. |
|----------------------------------|---|
| | Wear protective clothing when risk of exposure occurs. |
| | ▶ Use in a well-ventilated area. |
| | Avoid contact with incompatible materials. |
| | When handling, DO NOT eat, drink or smoke. |
| | Keep containers securely sealed when not in use. |
| Safe handling | Avoid physical damage to containers. |
| | Always wash hands with soap and water after handling. |
| | Work clothes should be laundered separately. |
| | Use good occupational work practice. |
| | Observe manufacturer's storage and handling recommendations contained within this SDS. |
| | Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions are |
| | maintained. |
| Fire and explosion protection | See section 5 |
| | Store in original containers. |
| | Keep containers securely sealed. |
| | Store in a cool, dry area protected from environmental extremes. |
| | Store away from incompatible materials and foodstuff containers. |
| | Protect containers against physical damage and check regularly for leaks. |
| Other information | Observe manufacturer's storage and handling recommendations contained within this SDS. |
| | For major quantities: |
| | Consider storage in bunded areas - ensure storage areas are isolated from sources of community water (including |
| | stormwater, ground water, lakes and streams}. |
| | Ensure that accidental discharge to air or water is the subject of a contingency disaster management plan; this may require |
| | consultation with local authorities. |

7.2. Conditions for safe storage, including any incompatibilities

| Suitable container | Lined metal can, lined metal pail/ can. Plastic pail. Polyliner drum. Packing as recommended by manufacturer. Check all containers are clearly labelled and free from leaks. |
|---|--|
| Storage incompatibility | Avoid contamination of water, foodstuffs, feed or seed. None known |
| Hazard categories in accordance with Regulation (EC) No 1272/2008 | E1: Hazardous to the Aquatic Environment in Category Acute 1 or Chronic 1 |
| Qualifying quantity (tonnes) of dangerous substances as referred to in Article 3(10) for the application of | E1 Lower- / Upper-tier requirements: 100 / 200 |

7.3. Specific end use(s)

See section 1.2

SECTION 8 Exposure controls / personal protection

8.1. Control parameters

| Ingredient | DNELs Exposure Pattern Worker | PNECs Compartment |
|---------------|---|--------------------------|
| Not Available | Dermal 4.5 mg/kg bw/day (Systemic, Chronic) | 7.8 μg/L (Water (Fresh)) |

| Ingredient | DNELs Exposure Pattern Worker | PNECs Compartment |
|------------|--|--|
| | Inhalation 1 mg/m ³ (Systemic, Chronic) Inhalation 1 mg/m ³ (Local, Chronic) Dermal 2.25 mg/kg bw/day (Systemic, Chronic) * Inhalation 20 μg/m ³ (Systemic, Chronic) * Oral 0.041 mg/kg bw/day (Systemic, Chronic) * Oral 0.082 mg/kg bw/day (Systemic, Acute) * | 5.2 μg/L (Water - Intermittent release) 87 mg/kg sediment dw (Sediment (Fresh Water)) 676 mg/kg sediment dw (Sediment (Marine)) 65 mg/kg soil dw (Soil) 230 μg/L (STP) |

* Values for General Population

| Ingredient | Original IDLH | | Revised IDLH | |
| Copper(II) oxide | Not Available | | Not Available | |

8.2. Exposure controls

| | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk. Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use. Employers may need to use multiple types of controls to prevent employee overexposure. Local exhaust ventilation is required where solids are handled as powders or crystals; even when particulates are relatively large, a certain proportion will be powdered by mutual friction. If in spite of local exhaust an adverse concentration of the substance in air could occur, respiratory protection should be considered. Such protection might consist of: (a): particle dust respirators, if necessary, combined with an absorption cartridge; (b): filter respirators with absorption cartridge or canister of the right type; (c): fresh-air hoods or masks. Air contaminants generated in the workplace possess varying "escape" velocities which, in turn, determine the "capture velocities" of fresh circulating air required to effectively remove the contaminant. | | | |
|--|--|--|---|--|
| 8.2.1. Appropriate engineering controls | Type of Contaminant: | | Air Speed: | |
| | direct spray, spray painting in shallow booths, drum filling, conveyer loading, crusher dusts, gas discharge (active generation into zone of rapid air motion) | | 1-2.5 m/s (200-500 f/min.) | |
| | grinding, abrasive blasting, tumbling, high speed wheel generated dusts (released at high initial velocity into zone of very high rapid air motion). | | 2.5-10 m/s (500-2000 f/min.) | |
| | Within each range the appropriate value depends on: | | | |
| | Lower end of the range | Upper end of the range | | |
| | 1: Room air currents minimal or favourable to capture | 1: Disturbing room air currents | | |
| | 2: Contaminants of low toxicity or of nuisance value only. | 2: Contaminants of high toxicity | | |
| | 3: Intermittent, low production. | 3: High production, heavy use | | |
| | 4: Large hood or large air mass in motion | 4: Small hood-local control only | | |
| | Simple theory shows that air velocity falls rapidly with distance generally decreases with the square of distance from the ext extraction point should be adjusted, accordingly, after referent extraction fan, for example, should be a minimum of 4-10 m/ distant from the extraction point. Other mechanical considerat apparatus, make it essential that theoretical air velocities are | raction point (in simple cases). Therefore nee to distance from the contaminating so s (800-2000 f/min) for extraction of crushe ations, producing performance deficits wit | the air speed at the burce. The air velocity at the er dusts generated 2 metres hin the extraction | |

| | installed or used. |
|---|---|
| 8.2.2. Individual protection measures, such as personal protective equipment | |
| Eye and face protection | Safety glasses with side shields Chemical goggles. [AS/NZS 1337.1, EN166 or national equivalent] Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59]. |
| Skin protection | See Hand protection below |
| Hands/feet protection | The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended. Subtability and durability of glove type is dependent on usage. Important factors in the selection of gloves include: - trequency and duration of contact, - ehemical resistance of glove material, - glove thickness and - daxterity Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent) When prolonged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 240 minutes according to EN 374, AS/NZS 2161.1 or national equivalent) is recommended Some glove oplymer types are less affected by movement and this should be taken into account when considering gloves for long-term use Some glove oplymer types are less affected by movement and this should be taken into account when considering gloves for long-term use Contaminated gloves should be replaced As defined in ASTM F-739-96 in any application, gloves are rated as: - Excellent when breakthrough time > 20 min |
| Body protection | See Other protection below |
| Other protection | No special equipment needed when handling small quantities. OTHERWISE: • Overalls. • Barrier cream. • Eyewash unit. |

Type -P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

| Required Minimum Protection Factor | Half-Face Respirator | Full-Face Respirator | Powered Air Respirator |
|------------------------------------|----------------------|----------------------|------------------------|
| up to 10 x ES | P1 Air-line* | - | PAPR-P1 - |
| up to 50 x ES | Air-line** | P2 | PAPR-P2 |
| up to 100 x ES | - | P3 | - |
| | | Air-line* | - |
| 100+ x ES | - | Air-line** | PAPR-P3 |

* - Negative pressure demand ** - Continuous flow

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

· Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.

• The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).

Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.

• Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program.

• Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU)

 \cdot Use approved positive flow mask if significant quantities of dust becomes airborne.

· Try to avoid creating dust conditions.

8.2.3. Environmental exposure controls

See section 12

SECTION 9 Physical and chemical properties

9.1. Information on basic physical and chemical properties

| Appearance | Black | | | |
|---|---------------|--|----------------|--|
| | | | | |
| Physical state | Divided Solid | Relative density (Water = 1) | Not Available | |
| Odour | Not Available | Partition coefficient n-octanol / water | Not Available | |
| Odour threshold | Not Available | Auto-ignition temperature (°C) | Not Available | |
| pH (as supplied) | Not Available | Decomposition temperature (°C) | Not Available | |
| Melting point / freezing point (°C) | 1362 | Viscosity (cSt) | Not Available | |
| Initial boiling point and boiling range (°C) | 2000 | Molecular weight (g/mol) | Not Available | |
| Flash point (°C) | Not Available | Taste | Not Available | |
| Evaporation rate | Not Available | Explosive properties | Not Available | |
| Flammability | Not Available | Oxidising properties | Not Available | |
| Upper Explosive Limit (%) | Not Available | Surface Tension (dyn/cm or mN/m) | Not Applicable | |
| Lower Explosive Limit (%) | Not Available | Volatile Component (%vol) | Not Available | |
| Vapour pressure (kPa) | Not Available | Gas group | Not Available | |
| Solubility in water | Immiscible | pH as a solution (1%) | Not Available | |
| Vapour density (Air = 1) | 6.315 | VOC g/L | Not Available | |
| Nanoform Solubility | Not Available | Nanoform Particle Characteristics | Not Available | |
| Particle Size | Not Available | | | |

9.2. Other information

Not Available

SECTION 10 Stability and reactivity

| 10.1.Reactivity | See section 7.2 |
|---|--|
| 10.2. Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| 10.3. Possibility of hazardous reactions | See section 7.2 |
| 10.4. Conditions to avoid | See section 7.2 |
| 10.5. Incompatible materials | See section 7.2 |
| 10.6. Hazardous decomposition products | See section 5.3 |

SECTION 11 Toxicological information

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008 Information on toxicological effects

| Inhaled | The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting. Persons with impaired respiratory function, airway diseases and conditions such as emphysema or chronic bronchitis, may incur further disability if excessive concentrations of particulate are inhaled. If prior damage to the circulatory or nervous systems has occurred or if kidney damage has been sustained, proper screenings should be conducted on individuals who may be exposed to further risk if handling and use of the material result in excessive exposures. |
|--------------|--|
| Ingestion | The material has NOT been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroborating animal or human evidence. |
| Skin Contact | The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable gloves be used in an occupational setting. |
| Eye | Although the material is not thought to be an irritant (as classified by EC Directives), direct contact with the eye may cause transient discomfort characterised by tearing or conjunctival redness (as with windburn). Slight abrasive damage may also result. |
| Chronic | Long-term exposure to the product is not thought to produce chronic effects adverse to the health (as classified by EC Directives using animal models); nevertheless exposure by all routes should be minimised as a matter of course. Long term exposure to high dust concentrations may cause changes in lung function i.e. pneumoconiosis, caused by particles less than 0.5 micron penetrating and remaining in the lung. |

| TOXICITY IRRITATION | | IRRITATION |
|---------------------|--|---------------|
| Copper(II) oxide | dermal (rat) LD50: >2000 mg/kg ^[1] | Not Available |

| vPvB X X X | | | × |
| PBT Criteria fulfilled? | | | |
| vPvB | | | No |

12.6. Endocrine disrupting properties

No evidence of endocrine disrupting properties were found in the current literature.

12.7. Other adverse effects

No evidence of ozone depleting properties were found in the current literature.

SECTION 13 Disposal considerations

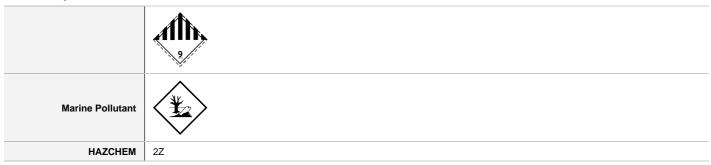

13.1. Waste treatment methods

| Product / Packaging disposal | Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked. A Hierarchy of Controls seems to be common - the user should investigate: Reduction Reuse Recycling |
|---------------------------------|--|

| Disposal (if all else fails) This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intellife considerations should also be applied in making decisions of this type. Note that properties of a material may and recycling or reuse may not always be appropriate. In most instances the supplier of the material should be of DO NOT allow wash water from cleaning or process equipment to enter drains. It may be necessary to collect all wash water for treatment before disposal. In all cases disposal to sewer may be subject to local laws and regulations and these should be considered for Where in doubt contact the responsible authority. Recycle wherever possible or consult manufacturer for recycling options. Consult State Land Waste Management Authority for disposal. | |
|--|---|
| | Bury residue in an authorised landfill. Recycle containers if possible, or dispose of in an authorised landfill. |
| Waste treatment options | Not Available |
| Sewage disposal options | Not Available |

| 14.5. Environmental hazard | Environmentally hazardous | | |
| 14.6. Special precautions for user | Classification code | M7 | |
| | Special provisions | 274; 335; 375; 601 | |
| | Limited quantity | 5 kg | |
| | Equipment required | PP, A*** | |
| | Fire cones number | 0 | |

14.7. Maritime transport in bulk according to IMO instruments

14.7.1. Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

14.7.2. Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

Product name Group

14.7.3. Transport in bulk in accordance with the IGC Code

| Product name | Ship Type | |
|-----------------------------------|-----------|--|
| | | |
| SECTION 15 Regulatory information | | |

15.1. Safety, health and environmental regulations / legislation specific for the substance or mixture

This safety data sheet is in compliance with the following EU legislation and its adaptations - as far as applicable - : Directives 98/24/EC, - 92/85/EEC, - 94/33/EC, - 2008/98/EC, - 2010/75/EU; Commission Regulation (EU) 2020/878; Regulation (EC) No 1272/2008 as updated through ATPs.

Information according to 2012/18/EU (Seveso III):

Seveso Category E1

15.2. Chemical safety assessment

For further information please look at the Chemical Safety Assessment and Exposure Scenarios prepared by your Supply Chain if available.

ECHA SUMMARY

Not Applicable

National Inventory Status

| National Inventory | Status |
|--|--|
| Australia - AIIC / Australia Non-Industrial Use | Not Available |
| Canada - DSL | Not Available |
| Canada - NDSL | Not Available |
| China - IECSC | Not Available |
| Europe - EINEC / ELINCS / NLP | Not Available |
| Japan - ENCS | Not Available |
| Korea - KECI | Not Available |
| New Zealand - NZIoC | Not Available |
| Philippines - PICCS | Not Available |
| USA - TSCA | Not Available |
| Taiwan - TCSI | Not Available |
| Mexico - INSQ | Not Available |
| Vietnam - NCI | Not Available |
| Russia - FBEPH | Not Available |
| Legend: | Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration. |

SECTION 16 Other information

| Revision Date | 16/09/2022 |
|---------------|------------|
| Initial Date | 16/09/2022 |

Full text Risk and Hazard codes

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

For detailed advice on Personal Protective Equipment, refer to the following EU CEN Standards:

EN 166 Personal eye-protection

- EN 340 Protective clothing
- EN 374 Protective gloves against chemicals and micro-organisms
- EN 13832 Footwear protecting against chemicals
- EN 133 Respiratory protective devices

Definitions and abbreviations

PC - TWA: Permissible Concentration-Time Weighted Average

PC - STEL: Permissible Concentration-Short Term Exposure Limit

IARC: International Agency for Research on Cancer

ACGIH: American Conference of Governmental Industrial Hygienists

STEL: Short Term Exposure Limit

TEEL: Temporary Emergency Exposure Limit.

IDLH: Immediately Dangerous to Life or Health Concentrations ES: Exposure Standard OSF: Odour Safety Factor NOAEL :No Observed Adverse Effect Level LOAEL: Lowest Observed Adverse Effect Level TLV: Threshold Limit Value LOD: Limit Of Detection OTV: Odour Threshold Value **BCF: BioConcentration Factors BEI: Biological Exposure Index** AIIC: Australian Inventory of Industrial Chemicals **DSL: Domestic Substances List** NDSL: Non-Domestic Substances List IECSC: Inventory of Existing Chemical Substance in China EINECS: European INventory of Existing Commercial chemical Substances ELINCS: European List of Notified Chemical Substances NLP: No-Longer Polymers ENCS: Existing and New Chemical Substances Inventory **KECI:** Korea Existing Chemicals Inventory NZIoC: New Zealand Inventory of Chemicals PICCS: Philippine Inventory of Chemicals and Chemical Substances TSCA: Toxic Substances Control Act TCSI: Taiwan Chemical Substance Inventory INSQ: Inventario Nacional de Sustancias Químicas NCI: National Chemical Inventory FBEPH: Russian Register of Potentially Hazardous Chemical and Biological Substances
