

cis,cis-1,5-Cyclooctadiene Apollo Scientific

Part Number: **OR100000** Version No: **1.1** Safety Data Sheet (Conforms to Annex II of REACH (1907/2006) - Regulation 2020/878) Chemwatch Hazard Alert Code: 2

Issue Date: **12/03/2023** Print Date: **31/07/2023** S.REACH.GBR.EN

SECTION 1 Identification of the substance / mixture and of the company / undertaking

1.1. Product Identifier

| Product name | cis,cis-1,5-Cyclooctadiene |
|----------------------------------|----------------------------|
| Chemical Name | cyclooctadiene |
| Synonyms | Not Available |
| Proper shipping name | CYCLOOCTADIENES |
| Chemical formula | C8H12 |
| Other means of identification | Not Available |
| CAS number | 111-78-4* |
| EC number | 203-907-1 |

1.2. Relevant identified uses of the substance or mixture and uses advised against

| Relevant identified uses | Use according to manufacturer's directions. | |
|--------------------------|--|--|
| Uses advised against | No specific uses advised against are identified. | |

1.3. Details of the manufacturer or supplier of the safety data sheet

| Registered company name | Apollo Scientific | |
|-------------------------|---|--|
| Address | /hitefield Road, Bredbury SK62QR United Kingdom | |
| Telephone | 1614060505 | |
| Fax | 0161 406 0506 | |
| Website | http://www.apolloscientific.co.uk/ | |
| Email | sales@apolloscientific.co.uk | |

1.4. Emergency telephone number

| Association / Organisation | Not Available |
|-----------------------------------|---------------|
| Emergency telephone numbers | Not Available |
| Other emergency telephone numbers | Not Available |

SECTION 2 Hazards identification

2.1. Classification of the substance or mixture

| Classification according to | H226 - Flammable Liquids Category 3, H400 - Hazardous to the Aquatic Environment Acute Hazard Category 1, H332 - Acute |
|-----------------------------|--|
| regulation (EC) No | Toxicity (Inhalation) Category 4, H302 - Acute Toxicity (Oral) Category 4, H315 - Skin Corrosion/Irritation Category 2, H319 - |

| 1272/2008 [CLP] and amendments ^[1] | Serious Eye Damage/Eye Irritation Category 2, H410 - Hazardous to the Aquatic Environment Long-Term Hazard Category 1, H317 - Sensitisation (Skin) Category 1B | |
|---|--|--|
| Legend: | 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI | |

2.2. Label elements

| Hazard pictogram(s) | |
|---------------------|---------|
| | |
| Signal word | Warning |

Hazard statement(s)

| H226 | Flammable liquid and vapour. |
|------|---|
| H332 | Harmful if inhaled. |
| H302 | Harmful if swallowed. |
| H315 | Causes skin irritation. |
| H319 | Causes serious eye irritation. |
| H410 | Very toxic to aquatic life with long lasting effects. |
| H317 | May cause an allergic skin reaction. |

Supplementary statement(s)

Not Applicable

Precautionary statement(s) Prevention

| P210 | Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. |
|------|--|
| P233 | Keep container tightly closed. |
| P271 | Use only outdoors or in a well-ventilated area. |
| P280 | Wear protective gloves, protective clothing, eye protection and face protection. |
| P240 | Ground and bond container and receiving equipment. |
| P241 | Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment. |
| P242 | Use non-sparking tools. |
| P243 | Take action to prevent static discharges. |
| P261 | Avoid breathing mist/vapours/spray. |
| P264 | Wash all exposed external body areas thoroughly after handling. |
| P270 | Do not eat, drink or smoke when using this product. |
| P273 | Avoid release to the environment. |
| P272 | Contaminated work clothing should not be allowed out of the workplace. |
| | |

Precautionary statement(s) Response

| P370+P378 | In case of fire: Use alcohol resistant foam or normal protein foam to extinguish. | | |
|----------------|--|--|--|
| P302+P352 | IF ON SKIN: Wash with plenty of water. | | |
| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. | | |
| P333+P313 | If skin irritation or rash occurs: Get medical advice/attention. | | |
| P337+P313 | If eye irritation persists: Get medical advice/attention. | | |
| P362+P364 | Take off contaminated clothing and wash it before reuse. | | |
| P391 | Collect spillage. | | |
| P301+P312 | IF SWALLOWED: Call a POISON CENTER/doctor/physician/first aider if you feel unwell. | | |
| P303+P361+P353 | IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [or shower]. | | |
| P304+P340 | IF INHALED: Remove person to fresh air and keep comfortable for breathing. | | |
| P330 | Rinse mouth. | | |

P403+P235 Store in a well-ventilated place. Keep cool.

Precautionary statement(s) Disposal

P501

Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

2.3. Other hazards

REACH - Art.57-59: The mixture does not contain Substances of Very High Concern (SVHC) at the SDS print date.

SECTION 3 Composition / information on ingredients

3.1.Substances

| 1. CAS No 2.EC No 3.Index No 4.REACH No | %[weight] | Name | Classification according to regulation (EC) No 1272/2008 [CLP] and amendments | SCL / M-Factor | Nanoform Particle Characteristics |

Legend: 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 3. Classification drawn from C&L; * EU IOELVs available; [e] Substance identified as having endocrine disrupting properties

3.2.Mixtures

See 'Information on ingredients' in section 3.1

SECTION 4 First aid measures

4.1. Description of first aid measures

| Eye Contact | If this product comes in contact with eyes: Wash out immediately with water. If irritation continues, seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. | |
|--------------|--|--|
| Skin Contact | If skin or hair contact occurs: Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. | |
| Inhalation | If fumes, aerosols or combustion products are inhaled remove from contaminated area. Other measures are usually unnecessary. | |
| Ingestion | Immediately give a glass of water. First aid is not generally required. If in doubt, contact a Poisons Information Centre or a doctor. | |

4.2 Most important symptoms and effects, both acute and delayed

See Section 11

4.3. Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

- For acute or short term repeated exposures to petroleum distillates or related hydrocarbons:
- Primary threat to life, from pure petroleum distillate ingestion and/or inhalation, is respiratory failure.
- Patients should be quickly evaluated for signs of respiratory distress (e.g. cyanosis, tachypnoea, intercostal retraction, obtundation) and given oxygen. Patients with inadequate tidal volumes or poor arterial blood gases (pO2 50 mm Hg) should be intubated.
- Arrhythmias complicate some hydrocarbon ingestion and/or inhalation and electrocardiographic evidence of myocardial injury has been reported; intravenous lines and cardiac monitors should be established in obviously symptomatic patients. The lungs excrete inhaled solvents, so that hyperventilation improves clearance.
- A chest x-ray should be taken immediately after stabilisation of breathing and circulation to document aspiration and detect the presence of pneumothorax.
 Epinephrine (adrenalin) is not recommended for treatment of bronchospasm because of potential myocardial sensitisation to catecholamines. Inhaled
- cardioselective bronchodilators (e.g. Alupent, Salbutamol) are the preferred agents, with aminophylline a second choice.
- Lavage is indicated in patients who require decontamination; ensure use of cuffed endotracheal tube in adult patients. [Ellenhorn and Barceloux: Medical Toxicology]

SECTION 5 Firefighting measures

5.2. Special hazards arising from the substrate or mixture

| Fire Incompatibility | Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may |
|----------------------|---|
| The meenpationity | result |

5.3. Advice for firefighters

| Fire Fighting | |
|-----------------------|---|
| Fire/Explosion Hazard | Liquid and vapour are flammable. Moderate fire hazard when exposed to heat or flame. Vapour forms an explosive mixture with air. Moderate explosion hazard when exposed to heat or flame. Vapour may travel a considerable distance to source of ignition. Heating may cause expansion or decomposition leading to violent rupture of containers. On combustion, may emit toxic fumes of carbon monoxide (CO). Combustion products include: , carbon monoxide (CO) other pyrolysis products typical of burning organic material. |

SECTION 6 Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

See section 8

6.2. Environmental precautions

See section 12

6.3. Methods and material for containment and cleaning up

| Minor Spills | Remove all ignition sources. Clean up all spills immediately. Avoid breathing vapours and contact with skin and eyes. Control personal contact with the substance, by using protective equipment. Contain and absorb small quantities with vermiculite or other absorbent material. Wipe up. Collect residues in a flammable waste container. |
|--------------|---|
| Major Spills | |

6.4. Reference to other sections

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

7.1. Precautions for safe handling

| 1. Precautions for safe | The conductivity of this material may make it a static accumulator., A liquid is typically considered nonconductive if its conductivity is below 100 pS/m and is considered semi-conductive if its conductivity is below 10 000 pS/m., Whether a liquid is nonconductive or semi-conductive, the precautions are the same., A number of factors, for example liquid temperature, presence of contaminants, and anti-static additives can greatly influence the conductivity of a liquid. Even with proper grounding and bonding, this material can still accumulate an electrostatic charge. If sufficient charge is allowed to accumulate, electrostatic discharge and ignition of flammable air-vapour mixtures can occur. Containers, even those that have been emptied, may contain explosive vapours. Do NOT cut, drill, grind, weld or perform similar operations on or near containers. Avoid all personal contact, including inhalation. Wear protective clothing when risk of overexposure occurs. Use in a well-ventilated area. Prevent concentration in hollows and sumps. DO NOT enter confined spaces until atmosphere has been checked. Avoid smoking, naked lights or ignition sources. Avoid generation of static electricity. |
|-------------------------|---|
| | |
| | , , , , , , , , , , , , , , , , , , , |
| | DO NOT use plastic buckets. Earth all lines and equipment. |
| | Use spark-free tools when handling. |
| | Avoid contact with incompatible materials. |

| | When handling, DO NOT eat, drink or smoke. | | | | |
|----------------------------------|--|--|--|--|--|
| | Keep containers securely sealed when not in use. | | | | |
| | Avoid physical damage to containers. | | | | |
| | Always wash hands with soap and water after handling. | | | | |
| | Work clothes should be laundered separately. | | | | |
| | Use good occupational work practice. | | | | |
| | Observe manufacturer's storage and handling recommendations contained within this SDS. | | | | |
| | Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions. | | | | |
| Fire and explosion protection | See section 5 | | | | |
| | Store in original containers in approved flammable liquid storage area. | | | | |
| | Store away from incompatible materials in a cool, dry, well-ventilated area. | | | | |
| | • DO NOT store in pits, depressions, basements or areas where vapours may be trapped. | | | | |
| | No smoking, naked lights, heat or ignition sources. | | | | |
| | • Storage areas should be clearly identified, well illuminated, clear of obstruction and accessible only to trained and authorised | | | | |
| | personnel - adequate security must be provided so that unauthorised personnel do not have access. | | | | |
| | Store according to applicable regulations for flammable materials for storage tanks, containers, piping, buildings, rooms, | | | | |
| | cabinets, allowable quantities and minimum storage distances. | | | | |
| | Use non-sparking ventilation systems, approved explosion proof equipment and intrinsically safe electrical systems. | | | | |
| Other information | Have appropriate extinguishing capability in storage area (e.g. portable fire extinguishers - dry chemical, foam or carbon | | | | |
| | dioxide) and flammable gas detectors. | | | | |
| | Keep adsorbents for leaks and spills readily available. | | | | |
| | Protect containers against physical damage and check regularly for leaks. | | | | |
| | Observe manufacturer's storage and handling recommendations contained within this SDS. | | | | |
| | In addition, for tank storages (where appropriate): | | | | |
| | Store in grounded, properly designed and approved vessels and away from incompatible materials. | | | | |
| | • For bulk storages, consider use of floating roof or nitrogen blanketed vessels; where venting to atmosphere is possible, equip | | | | |
| | storage tank vents with flame arrestors; inspect tank vents during winter conditions for vapour/ ice build-up. | | | | |
| | Storage tanks should be above ground and diked to hold entire contents. | | | | |

7.2. Conditions for safe storage, including any incompatibilities

| | torage, including any incompatibilities |
|-------------------------|--|
| Suitable container | Packing as supplied by manufacturer. Plastic containers may only be used if approved for flammable liquid. Check that containers are clearly labelled and free from leaks. For low viscosity materials (i) : Drums and jerry cans must be of the non-removable head type. (ii) : Where a can is to be used as an inner package, the can must have a screwed enclosure. For materials with a viscosity of at least 2680 cSt. (23 deg. C) For manufactured product having a viscosity of at least 250 cSt. (23 deg. C) Manufactured product that requires stirring before use and having a viscosity of at least 20 cSt (25 deg. C): (i) Removable head packaging; (ii) Cans with friction closures and (iii) low pressure tubes and cartridges may be used. Where combination packages are used, and the inner packages are of glass, there must be sufficient inert cushioning material in contact with inner and outer packages In addition, where inner packagings are glass and contain liquids of packing group I there must be sufficient inert absorbent to absorb any spillage, unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic. |
| Storage incompatibility | Avoid reaction with oxidising agents The various oxides of nitrogen and peroxyacids may be dangerously reactive in the presence of alkenes. BRETHERICK L.: Handbook of Reactive Chemical Hazards Avoid reaction with strong Lewis or mineral acids. Reaction with halogens requires carefully controlled conditions. Free radical initiators should be avoided. The interaction of alkenes and alkynes with nitrogen oxides and oxygen may produce explosive addition products; these may form at very low temperatures and explode on heating to higher temperatures (the addition products from 1,3-butadiene and cyclopentadiene form rapidly at -150 C and ignite or explode on warming to -35 to -15 C). These derivatives ("pseudo- nitrosites") were formerly used to characterise terpene hydrocarbons. Exposure to air must be kept to a minimum so as to limit the build-up of peroxide concentration is substantially above 10 ppm (as active oxygen) since explosive decomposition may occur. Distillate must be immediately inhibited to prevent peroxide formation. The effectiveness of the antioxidant is limited once the peroxide levels exceed 10 ppm as active oxygen. Addition of more inhibitor at this point is generally ineffective. Prior to distillation it is recommended that the product should be washed with aqueous ferrous ammonium sulfate to destroy peroxides; the washed product should be immediately re-inhibited. A range of exothermic decomposition energies for double bonds is given as 40-90 kJ/mol. The relationship between energy of decomposition and processing hazards has been the subject of discussion; it is suggested that values of energy released per unit of mass, rather than on a molar basis (J/g) be used in the assessment. For example, in "open vessel processes" (with man-hole size openings, in an industrial setting), substances with exothermic decomposition energies below 500 J/g are unlikely to present a danger, whilst those in "closed vessel processes" (opening is |

Page 6 of 15 cis,cis-1,5-Cyclooctadiene

| | stabilised. This may be of relevance in atmospheric chemistry. Violent explosions at low temperatures in ammonia synthesis gas units have been traced to the addition products of dienes and nitrogen dioxide Air Sensitive Store at 2-8°C Moisture sensitive |
|---|---|
| Hazard categories in accordance with Regulation (EC) No 1272/2008 | P5a: Flammable Liquids, P5b: Flammable Liquids, P5c: Flammable Liquids, E1: Hazardous to the Aquatic Environment in Category Acute 1 or Chronic 1 |
| Qualifying quantity (tonnes) of dangerous substances as referred to in Article 3(10) for the application of | P5a Lower- / Upper-tier requirements: 10 / 50 P5b Lower- / Upper-tier requirements: 50 / 200 P5c Lower- / Upper-tier requirements: 5 000 / 50 000 E1 Lower- / Upper-tier requirements: 100 / 200 |

7.3. Specific end use(s)

8.2. Exposure controls

| 8.2.1. Appropriate engineering controls | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk. Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use. Employers may need to use multiple types of controls to prevent employee overexposure. For flammable liquids and flammable gases, local exhaust ventilation or a process enclosure ventilation system may be required Ventilation equipment should be explosion-resistant. Air contaminants generated in the workplace possess varying "escape" velocities which, in turn, determine the "capture velocities" of fresh circulating air required to effectively remove the contaminant. | | | |
|---|--|---------------------------------------|--|--|
| | Type of Contaminant: | Air Speed: | | |
| | solvent, vapours, degreasing etc., evaporating from tank (in still air). | 0.25-0.5 m/s (50-100 f/min.) | | |

8.2.2.

0.5-1 m/s

(100-200

cis,cis-1,5-Cyclooctadiene

aerosols, fumes from pouring operations, intermittent container filling, low speed conveyer transfers, welding,

| | spray drift, plating acid fumes, pickling (released at low vel | ocity into zone of active generation) | (100-200 f/min.) | |
|---|--|--|--|--|
| | direct spray, spray painting in shallow booths, drum filling, (active generation into zone of rapid air motion) | conveyer loading, crusher dusts, gas discharge | 1-2.5 m/s (200-500 f/min.) | |
| | Within each range the appropriate value depends on: | | | |
| | Lower end of the range | Upper end of the range | | |
| | 1: Room air currents minimal or favourable to capture | 1: Disturbing room air currents | | |
| | 2: Contaminants of low toxicity or of nuisance value only. | 2: Contaminants of high toxicity | | |
| | 3: Intermittent, low production. | 3: High production, heavy use | | |
| | 4: Large hood or large air mass in motion | 4: Small hood-local control only | | |
| 3.2.2. Individual protection measures, such as personal protective equipment | Simple theory shows that air velocity falls rapidly with distance generally decreases with the square of distance from the extentation point should be adjusted, accordingly, after referer extraction fan, for example, should be a minimum of 1-2 m/s meters distant from the extraction point. Other mechanical comparatus, make it essential that theoretical air velocities are installed or used. • Adequate ventilation is typically taken to be that which limits the building, room or enclosure containing the dangerous sult. • Ventilation for plant and machinery is normally considered a substance that might potentially be present to no more than 2 can be acceptable where additional safeguards are provided example, gas detectors linked to emergency shutdown of the exhaust ventilation on solvent evaporating ovens and gas tur. • Temporary exhaust ventilation systems may be provided for maintenance in tanks or other confined spaces or in an emers should be carefully considered The atmosphere should be the substance does not exceed 10% of the LEL (irrespective of the component) of the exhaust ventilation of the carefully considered. | raction point (in simple cases). Therefore the air spince to distance from the contaminating source. The (200-400 f/min.) for extraction of solvents generate onsiderations, producing performance deficits within a multiplied by factors of 10 or more when extraction is the average concentration to no more than 25% or bstance. adequate if it limits the average concentration of any 25% of the LEL. However, an increase up to a maxil to prevent the formation of a hazardous explosive a process might be used together with maintaining or bine enclosures. It non-routine higher-risk activities, such as cleaning rgency after a release. The work procedures for succontinuously monitored to ensure that ventilation is ventilation should ensure that the concentration of the the concentration of the the concentration of the the formation of the concentration of the concentrat | eed at the air velocity at the d in a tank 2 the extraction a systems are f the LEL within y dangerous mum 50% LEL atmosphere. For or increasing the h, repair or th activities adequate and the | |
| Eye and face protection | Safety glasses with side shields Chemical goggles. [AS/NZS 1337.1, EN166 or national equivalent] Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59]. | | | |
| Skin protection | See Hand protection below | | | |
| Hands/feet protection | Wear general protective gloves, eg. light weight rubber glove The selection of suitable gloves does not only depend on the manufacturer to manufacturer. Where the chemical is a prep can not be calculated in advance and has therefore to be che The exact break through time for substances has to be obtai observed when making a final choice. Personal hygiene is a key element of effective hand care. Gl should be washed and dried thoroughly. Application of a non Suitability and durability of glove type is dependent on usage frequency and duration of contact, chemical resistance of glove material, glove thickness and dexterity Select gloves tested to a relevant standard (e.g. Europe EN When prolonged or frequently repeated contact may occur, greater than 240 minutes according to EN 374, AS/NZS 216 When only brief contact is expected, a glove with a protecti according to EN 374, AS/NZS 2161.10.1 or national equivale Some glove polymer types are less affected by movement a long-term use. | e material, but also on further marks of quality which aration of several substances, the resistance of the ecked prior to the application. ned from the manufacturer of the protective gloves in oves must only be worn on clean hands. After using perfumed moisturiser is recommended. a. Important factors in the selection of gloves include 374, US F739, AS/NZS 2161.1 or national equivale a glove with a protection class of 5 or higher (break 1.10.1 or national equivalent) is recommended. on class of 3 or higher (breakthrough time greater the ent) is recommended. and this should be taken into account when conside | glove material and has to be g gloves, hands a: nt). through time han 60 minutes | |

As defined in ASTM F-739-96 in any application, gloves are rated as:

Continued...

| | Excellent when breakthrough time > 480 min Good when breakthrough time > 20 min Fair when breakthrough time < 20 min Poor when glove material degrades For general applications, gloves with a thickness typically greater than 0.35 mm, are recommended. It should be emphasised that glove thickness is not necessarily a good predictor of glove resistance to a specific chemical, as the permeation efficiency of the glove will be dependent on the exact composition of the glove material. Therefore, glove selection should also be based on consideration of the task requirements and knowledge of breakthrough times. Glove thickness may also vary depending on the glove manufacturer, the glove type and the glove model. Therefore, the manufacturers technical data should always be taken into account to ensure selection of the most appropriate glove for the task. Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks. For example: Thinner gloves (down to 0.1 mm or less) may be required where a high degree of manual dexterity is needed. However, these gloves are only likely to give short duration protection and would normally be just for single use applications, then disposed of. Thicker gloves (up to 3 mm or more) may be required where there is a mechanical (as well as a chemical) risk i.e. where there |
|------------------|---|
| | is abrasion or puncture potential Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended. |
| Body protection | See Other protection below |
| Other protection | Overalls. PVC Apron. PVC protective suit may be required if exposure severe. Eyewash unit. Ensure there is ready access to a safety shower. Some plastic personal protective equipment (PPE) (e.g. gloves, aprons, overshoes) are not recommended as they may produce static electricity. For large scale or continuous use wear tight-weave non-static clothing (no metallic fasteners, cuffs or pockets). Non sparking safety or conductive footwear should be considered. Conductive footwear describes a boot or shoe with a sole made from a conductive compound chemically bound to the bottom components, for permanent control to electrically ground the foot an shall dissipate static electricity from the body to reduce the possibility of ignition of volatile compounds. Electrical resistance must range between 0 to 500,000 ohms. Conductive shoes should be stored in lockers close to the room in which they are worn. Personnel who have been issued conductive footwear should not wear them from their place of work to their homes and return. |

Respiratory protection

Type A Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Selection of the Class and Type of respirator will depend upon the level of breathing zone contaminant and the chemical nature of the contaminant. Protection Factors (defined as the ratio of contaminant outside and inside the mask) may also be important.

| Required minimum protection factor | Maximum gas/vapour concentration present in air p.p.m. (by volume) | Half-face Respirator | Full-Face Respirator |
|------------------------------------|--|-------------------------|-------------------------|
| up to 10 | 1000 | A-AUS / Class1 | - |
| up to 50 | 1000 | - | A-AUS / Class 1 |
| up to 50 | 5000 | Airline * | - |
| up to 100 | 5000 | - | A-2 |
| up to 100 | 10000 | - | A-3 |
| 100+ | | | Airline** |

* - Continuous Flow ** - Continuous-flow or positive pressure demand

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.

- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

8.2.3. Environmental exposure controls

See section 12

9.2. Other information

Not Available

SECTION 10 Stability and reactivity

| 10.1.Reactivity | See section 7.2 |
|---|--|
| 10.2. Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| 10.3. Possibility of hazardous reactions | See section 7.2 |
| 10.4. Conditions to avoid | See section 7.2 |
| 10.5. Incompatible materials | See section 7.2 |
| 10.6. Hazardous decomposition products | See section 5.3 |

SECTION 11 Toxicological information

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008 Information on toxicological effects

| Inhaled | The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting. |
|---|---|
| Ingestion The material has NOT been classified by EC Directives or other classification systems as "harmful by ingestion of the lack of corroborating animal or human evidence. | |
| Skin Contact | The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable gloves be used in an occupational setting. |
| Eye | Although the liquid is not thought to be an irritant (as classified by EC Directives), direct contact with the eye may produce transient discomfort characterised by tearing or conjunctival redness (as with windburn). |

| Chronic | Long-term exposure to the product is not thought to produce chronic effects adverse to the health (as classified by EC Directives using animal models); nevertheless exposure by all routes should be minimised as a matter of course. | | | |
|----------------------------|--|--|--|--|
| | ΤΟΧΙCITY | IRRITATION | | |
| cis,cis-1,5-Cyclooctadiene | dermal (rat) LD50: >3520 mg/kg ^[2] | Eye: no adverse effect observed (not irritating) ^[1] | | |
| | Oral (Rat) LD50: 1900 mg/kg ^[1] | Skin: no adverse effect observed (not irritating) ^[1] | | |
| Legend: | Value obtained from Europe ECHA Registered Substances - Acute toxicity 2. Value obtained from manufacturer's SDS. Unless otherwise specified data extracted from RTECS - Register of Toxic Effect of chemical Substances | | | |

| Acute Toxicity | × | Carcinogenicity | × |
|-----------------------------------|----------|--------------------------|---|
| Skin Irritation/Corrosion | ¥ | Reproductivity | × |
| Serious Eye Damage/Irritation | ~ | STOT - Single Exposure | × |
| Respiratory or Skin sensitisation | * | STOT - Repeated Exposure | × |
| Mutagenicity | × | Aspiration Hazard | × |

Legend: \mathbf{X} – Data either not available or does not \mathbf{V} – Data available to make classification

11.2 Information on other hazards

11.2.1. Endocrine disrupting properties

No evidence of endocrine disrupting properties were found in the current literature.

11.2.2. Other information

See Section 11.1

SECTION 12 Ecological information

12.1. Toxicity

| cis,cis-1,5-Cyclooctadiene | Endpoint | Test Duration (hr) | Species | Value | Source |
|--|----------|--------------------|-------------------------------|-----------|------------------|
| | EC50 | 72h | Algae or other aquatic plants | 4.61mg/l | 2 |
| | EC50 | 48h | Crustacea | 1.1mg/l | 2 |
| | LC50 | 96h | Fish | 44-90mg/l | Not Available |
| | EC0(ECx) | 24h | Crustacea | <0.37mg/l | 2 |
| Legend: Extracted from 1. IUCLID Toxicity Data 2. Europe ECHA Registered Substances - Ecotoxicological Information - Aquatic Toxicity 4. US EPA, Ecotox database - Aquatic Toxicity Data 5. ECETOC Aquatic Hazard Assessment Data 6. NITE (Japan) - Bioconcentration Data 7. METI (Japan) - Bioconcentration Data 8. Vendor Data | | | | | |

12.2. Persistence and degradability

| Ingre | edient | Persistence: Water/Soil | Persistence: Air |
|-------|---------------------------------------|-------------------------|---------------------------------------|
| | No Data available for all ingredients | | No Data available for all ingredients |

12.3. Bioaccumulative potential

| Ingredient | Bioaccumulation |
|------------|---------------------------------------|
| | No Data available for all ingredients |

12.4. Mobility in soil

| Ingredient | Mobility |
|------------|---------------------------------------|
| | No Data available for all ingredients |

12.5. Results of PBT and vPvB assessment

Р

| | Ρ | В | т | | |
|-------------------------|----------------------------|---------------|---------------|--|--|
| Relevant available data | Not Available | Not Available | Not Available | | |
| PBT | × | × | × | | |
| vPvB | × | × | × | | |
| PBT Criteria fulfilled? | PBT Criteria fulfilled? No | | | | |
| vPvB | No | | | | |

12.6. Endocrine disrupting properties

No evidence of endocrine disrupting properties were found in the current literature.

12.7. Other adverse effects

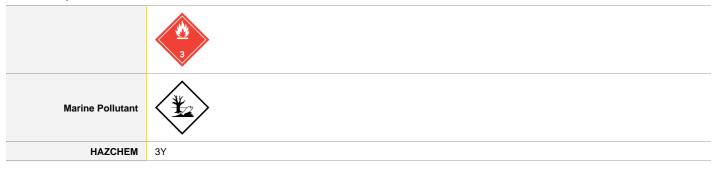

No evidence of ozone depleting properties were found in the current literature.

SECTION 13 Disposal considerations

13.1. Waste treatment methods

SECTION 14 Transport information

Labels Required

Land transport (ADR-RID)

| 14.1. UN number or ID number | 2520 |
|---------------------------------|-----------------|
| 14.2. UN proper shipping name | CYCLOOCTADIENES |

| 14.3. Transport hazard class(es) | Class | 3 | | | | |
|------------------------------------|--------------------------------|----------------|----------------|--|--|--|
| | Subsidiary risk Not Applicable | | | | | |
| 14.4. Packing group | Ш | III | | | | |
| 14.5. Environmental hazard | Environmentally hazardous | | | | | |
| | Hazard identifica | ation (Kemler) | 30 | | | |
| | Classification code | | F1 | | | |
| 14.6. Special precautions for user | Hazard Label | | 3 | | | |
| | Special provision | ns | Not Applicable | | | |
| | Limited quantity | | 5 L | | | |
| | Tunnel Restriction | on Code | 3 (D/E) | | | |

Air transport (ICAO-IATA / DGR)

| 14.1. UN number | 2520 | | | | | |
|------------------------------------|---------------------------|---------------------------------------|----------------|--|--|--|
| 14.2. UN proper shipping name | Cyclooctadienes | | | | | |
| 14.3. Transport hazard class(es) | ICAO/IATA Class 3 | | | | | |
| | ICAO / IATA Subrisk | ubrisk Not Applicable | | | | |
| | ERG Code 3L | | | | | |
| 14.4. Packing group | II | | | | | |
| 14.5. Environmental hazard | Environmentally hazardous | | | | | |
| 14.6. Special precautions for user | Special provisions | | Not Applicable | | | |
| | Cargo Only Packing Ir | nstructions | 366 | | | |
| | Cargo Only Maximum | Qty / Pack | 220 L | | | |
| | Passenger and Cargo | Packing Instructions | 355 | | | |
| | Passenger and Cargo | Maximum Qty / Pack | 60 L | | | |
| | Passenger and Cargo | Limited Quantity Packing Instructions | Y344 | | | |
| | Passenger and Cargo | Limited Maximum Qty / Pack | 10 L | | | |

Sea transport (IMDG-Code / GGVSee)

| 14.1. UN number | 2520 | | |
|------------------------------------|--------------------|----------------|--|
| 14.2. UN proper shipping name | CYCLOOCTADIENES | | |
| 14.3. Transport hazard | IMDG Class 3 | | |
| class(es) | IMDG Subrisk N | ot Applicable | |
| 14.4. Packing group | III | | |
| 14.5. Environmental hazard | Marine Pollutant | | |
| | EMS Number | F-E, S-D | |
| 14.6. Special precautions for user | Special provisions | Not Applicable | |
| | Limited Quantities | 5 L | |

Inland waterways transport (ADN)

| 14.1. UN number | 2520 |
|----------------------------------|------------------|
| 14.2. UN proper shipping name | CYCLOOCTADIENES |
| 14.3. Transport hazard class(es) | 3 Not Applicable |

| 14.4. Packing group | Ш | |
|------------------------------------|---------------------------|----------------|
| 14.5. Environmental hazard | Environmentally hazardous | |
| 14.6. Special precautions for user | Classification code | F1 |
| | Special provisions | Not Applicable |
| | Limited quantity | 5 L |
| | Equipment required | PP, EX, A |
| | Fire cones number | 0 |

14.7. Maritime transport in bulk according to IMO instruments

14.7.1. Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

14.7.2. Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

| Product name | Group |
|--------------|-------|
| | |

14.7.3. Transport in bulk in accordance with the IGC Code

| Product name Ship Type |
|------------------------|
|------------------------|

SECTION 15 Regulatory information

15.1. Safety, health and environmental regulations / legislation specific for the substance or mixture

This safety data sheet is in compliance with the following EU legislation and its adaptations - as far as applicable - : Directives 98/24/EC, - 92/85/EEC, - 94/33/EC, - 2008/98/EC, - 2010/75/EU; Commission Regulation (EU) 2020/878; Regulation (EC) No 1272/2008 as updated through ATPs.

Information according to 2012/18/EU (Seveso III):

| Seveso Category | P5a, P5b, P5c, E1 |
|-----------------|-------------------|
| | |

15.2. Chemical safety assessment

For further information please look at the Chemical Safety Assessment and Exposure Scenarios prepared by your Supply Chain if available.

ECHA SUMMARY

| Initial Date | 23/02/2023 |

Full text Risk and Hazard codes

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

For detailed advice on Personal Protective Equipment, refer to the following EU CEN Standards:

EN 166 Personal eye-protection

EN 340 Protective clothing

EN 374 Protective gloves against chemicals and micro-organisms

EN 13832 Footwear protecting against chemicals

EN 133 Respiratory protective devices
