

2,6-Dibromopyridine Apollo Scientific

Part Number: **OR28767** Version No: **2.2** Safety Data Sheet Chemwatch Hazard Alert Code: 4

Issue Date: **06/07/2023** Print Date: **06/07/2023** S.GHS.GB-NIR.EN

SECTION 1 Identification of the substance / mixture and of the company / undertaking

Product Identifier

| Product name | 2,6-Dibromopyridine |
|----------------------------------|------------------------------|
| Chemical Name | 2,6-dibromopyridine |
| Synonyms | Not Available |
| Proper shipping name | TOXIC SOLID, ORGANIC, N.O.S. |
| Chemical formula | C5-H3-Br2-N |
| Other means of identification | Not Available |
| CAS number | 626-05-1* |

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses N

Not Available

Details of the manufacturer or supplier of the safety data sheet

| Registered company name | Apollo Scientific | Apollo Scientific Itd |
|-------------------------|---|---|
| Address | Whitefield Road, Bredbury SK62QR United Kingdom | Whitefield Road, Bredbury Cheshire SK6 2QR United Kingdom (NI) |

SECTION 2 Hazards identification

Classification of the substance or mixture

Classification according to regulation (EC) No 1272/2008 [CLP] and

H300 - Acute Toxicity (Oral) Category 2, H411 - Hazardous to the Aquatic Environment Long-Term Hazard Category 2, H335 - Specific Target Organ Toxicity - Single Exposure (Respiratory Tract Irritation) Category 3, H315 - Skin Corrosion/Irritation Category 2, H319 - Serious Eye Damage/Eye Irritation Category 2, H317 - Sensitisation (Skin) Category 1

| amendments [1] | |
|----------------|--|
| Legend: | 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI |

Label elements

| Hazard pictogram(s) | |
|---------------------|--------|
| | |
| Signal word | Danger |

Hazard statement(s)

| H300 | Fatal if swallowed. | | | | |
|------|---|--|--|--|--|
| H411 | oxic to aquatic life with long lasting effects. | | | | |
| H335 | May cause respiratory irritation. | | | | |
| H315 | Causes skin irritation. | | | | |
| H319 | Causes serious eye irritation. | | | | |
| H317 | May cause an allergic skin reaction. | | | | |

Precautionary statement(s) Prevention

| P264 | Vash all exposed external body areas thoroughly after handling. | | | |
|------|--|--|--|--|
| P270 | o not eat, drink or smoke when using this product. | | | |
| P271 | Use only outdoors or in a well-ventilated area. | | | |
| P280 | Wear protective gloves, protective clothing, eye protection and face protection. | | | |
| P261 | Avoid breathing dust/fumes. | | | |
| P273 | Avoid release to the environment. | | | |
| P272 | Contaminated work clothing should not be allowed out of the workplace. | | | |

Precautionary statement(s) Response

| P301+P310 | IF SWALLOWED: Immediately call a POISON CENTER/doctor/physician/first aider. | | | | |
|----------------|---|--|--|--|--|
| P330 | Rinse mouth. | | | | |
| P302+P352 | IF ON SKIN: Wash with plenty of water. | | | | |
| P305+P351+P338 | F IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. | | | | |
| P312 | Call a POISON CENTER/doctor/physician/first aider/if you feel unwell. | | | | |
| P333+P313 | If skin irritation or rash occurs: Get medical advice/attention. | | | | |
| P337+P313 | If eye irritation persists: Get medical advice/attention. | | | | |
| P362+P364 | Take off contaminated clothing and wash it before reuse. | | | | |
| P391 | Collect spillage. | | | | |
| P304+P340 | IF INHALED: Remove person to fresh air and keep comfortable for breathing. | | | | |

Precautionary statement(s) Storage

| P405 | Store locked up. |
|-----------|--|
| P403+P233 | Store in a well-ventilated place. Keep container tightly closed. |

Precautionary statement(s) Disposal

Mixtures

See section above for composition of Substances

SECTION 4 First aid measures

Description of first aid measures

| Eye Contact | If this product comes in contact with the eyes: Immediately hold eyelids apart and flush the eye continuously with running water. Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes. Transport to hospital or doctor without delay. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. |
|--------------|---|
| Skin Contact | If skin contact occurs: Immediately remove all contaminated clothing, including footwear. Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. |
| Inhalation | If fumes or combustion products are inhaled remove from contaminated area. Lay patient down. Keep warm and rested. Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. Transport to hospital, or doctor, without delay. |
| Ingestion | IF SWALLOWED, REFER FOR MEDICAL ATTENTION, WHERE POSSIBLE, WITHOUT DELAY. For advice, contact a Poisons Information Centre or a doctor. Urgent hospital treatment is likely to be needed. In the mean time, qualified first-aid personnel should treat the patient following observation and employing supportive measures as indicated by the patient's condition. If the services of a medical officer or medical doctor are readily available, the patient should be placed in his/her care and a copy of the SDS should be provided. Further action will be the responsibility of the medical specialist. If medical attention is not available on the worksite or surroundings send the patient to a hospital together with a copy of the SDS. Where medical attention is not immediately available or where the patient is more than 15 minutes from a hospital or unless instructed otherwise: INDUCE vomiting with fingers down the back of the throat, ONLY IF CONSCIOUS. Lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. NOTE: Wear a protective glove when inducing vomiting by mechanical means. |

Indication of any immediate medical attention and special treatment needed

As in all cases of suspected poisoning, follow the ABCDEs of emergency medicine (airway, breathing, circulation, disability, exposure), then the ABCDEs of toxicology (antidotes, basics, change absorption, change distribution, change elimination). For poisons (where specific treatment regime is absent):

BASIC TREATMENT

Establish a patent airway with suction where necessary.

[•] Watch for signs of respiratory insufficiency and assist ventilation as necessary.

Administer oxygen by non-rebreather mask at 10 to 15 L/min.

Monitor and treat, where necessary, for pulmonary oedema.

[·] Monitor and treat, where necessary, for pullionary of

Monitor and treat, where necessary, for shock.

Anticipate seizures.

[•] DO NOT use emetics. Where ingestion is suspected rinse mouth and give up to 200 ml water (5 ml/kg recommended) for dilution where patient is able to

swallow, has a strong gag reflex and does not drool.

ADVANCED TREATMENT

- Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.
- Positive-pressure ventilation using a bag-valve mask might be of use.
- Monitor and treat, where necessary, for arrhythmias.
- Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications.
- Drug therapy should be considered for pulmonary oedema.
- Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.
- Treat seizures with diazepam.
- Proparacaine hydrochloride should be used to assist eye irrigation.
- BRONSTEIN, A.C. and CURRANCE, P.L.

EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994

SECTION 5 Firefighting measures

Extinguishing media

There is no restriction on the type of extinguisher which may be used.

Use extinguishing media suitable for surrounding area.

Special hazards arising from the substrate or mixture

| Fire Incompatibility None known. |
|----------------------------------|
|----------------------------------|

Advice for firefighters

| Fire Fighting | Alert Fire Brigade and tell them location and nature of hazard. Wear breathing apparatus plus protective gloves in the event of a fire. Prevent, by any means available, spillage from entering drains or water courses. Use fire fighting procedures suitable for surrounding area. DO NOT approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire. Equipment should be thoroughly decontaminated after use. |
|-----------------------|--|
| Fire/Explosion Hazard | Non combustible. Not considered a significant fire risk, however containers may burn. May emit poisonous fumes. |

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

| Minor Spills | Remove all ignition sources. Clean up all spills immediately. Avoid contact with skin and eyes. Control personal contact with the substance, by using protective equipment. Use dry clean up procedures and avoid generating dust. Place in a suitable, labelled container for waste disposal. |
|--------------|---|
| Major Spills | |

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling

Avoid all personal contact, including inhalation.
Wear protective clothing when risk of exposure occurs.

| | ► Use in a well-ventilated area. |
|-------------------|--|
| | Prevent concentration in hollows and sumps. |
| | DO NOT enter confined spaces until atmosphere has been checked. |
| | DO NOT allow material to contact humans, exposed food or food utensils. |
| | Avoid contact with incompatible materials. |
| | When handling, DO NOT eat, drink or smoke. |
| | Keep containers securely sealed when not in use. |
| | Avoid physical damage to containers. |
| | Always wash hands with soap and water after handling. |
| | Work clothes should be laundered separately. Launder contaminated clothing before re-use. |
| | Use good occupational work practice. |
| | Observe manufacturer's storage and handling recommendations contained within this SDS. |
| | Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions are maintained. |
| | Store in original containers. |
| | Keep containers securely sealed. |
| | Store in a cool, dry, well-ventilated area. |
| Other information | Store away from incompatible materials and foodstuff containers. |
| | Protect containers against physical damage and check regularly for leaks. |
| | Observe manufacturer's storage and handling recommendations contained within this SDS. |
| | · Observe manufacturers storage and nanding recommendations contained within this SDS. |

Conditions for safe storage, including any incompatibilities

| Suitable container | Lined metal can, lined metal pail/ can. Plastic pail. Polyliner drum. Packing as recommended by manufacturer. Check all containers are clearly labelled and free from leaks. For low viscosity materials Drums and jerricans must be of the non-removable head type. Where a can is to be used as an inner package, the can must have a screwed enclosure. For materials with a viscosity of at least 2680 cSt. (23 deg. C) and solids (between 15 C deg. and 40 deg C.): Removable head packaging; Cans with friction closures and low pressure tubes and cartridges may be used. Where combination packages are used, and the inner packages are of glass, there must be sufficient inert cushioning material in contact with inner and outer packages *. In addition, where inner packagings are glass and contain liquids of packing group I and II there must be sufficient inert absorbent to absorb any spillage *. * unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic. All inner and sole packagings for substances that have been assigned to Packaging Groups I or II on the basis of inhalation toxicity criteria, must be hermetically sealed. |
|-------------------------|---|
| Storage incompatibility | None known Light sensitive Store under argon |

SECTION 8 Exposure controls / personal protection

Control parameters

INGREDIENT DATA

| 2,6-Dibromopyridine | Not Available | | Not Available | |

Occupational Exposure Banding

| Ingredient | Occupational Exposure Band Rating | Occupational Exposure Band Limit | | |
|---------------------|--|--|--|--|
| 2,6-Dibromopyridine | E | ≤ 0.01 mg/m³ | | |
| Notes: | potency and the adverse health outcomes associated with ex | Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health. | | |

Exposure controls

| | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk. Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use. Employers may need to use multiple types of controls to prevent employee overexposure. Local exhaust ventilation usually required. If risk of overexposure exists, wear approved respirator. Correct fit is essential to obtain adequate protection. An approved self contained breathing apparatus (SCBA) may be required in some situations. Provide adequate ventilation in warehouse or closed storage area. Air contaminants generated in the workplace possess varying "escape" velocities which, in turn, determine the "capture velocities" of fresh circulating air required to effectively remove the contaminant. | | | | | |
|--|--|----------------------------------|--|---------------------------------|--|--|
| | Type of Contaminant: | | | Air Speed: | | |
| | solvent, vapours, degreasing etc., evaporating from tank (in still air). | | | 0.25-0.5 m/s (50-100 f/min.) | | |
| Appropriate engineering controls | aerosols, fumes from pouring operations, intermittent con- welding, spray drift, plating acid fumes, pickling (released | | | 0.5-1 m/s (100-200 f/min.) | | |
| | direct spray, spray painting in shallow booths, drum filling, conveyer loading, crusher dusts, gas discharge (active generation into zone of rapid air motion) | | | 1-2.5 m/s (200-500 f/min.) | | |
| | grinding, abrasive blasting, tumbling, high speed wheel generated dusts (released at high initial velocity into zone of very high rapid air motion). | | | 2.5-10 m/s (500-2000 f/min.) | | |
| | Within each range the appropriate value depends on: | | | | | |
| | Lower end of the range | Upper end of the range | | | | |
| | 1: Room air currents minimal or favourable to capture | 1: Disturbing room air currents | | | | |
| | 2: Contaminants of low toxicity or of nuisance value only. | 2: Contaminants of high toxicity | | | | |
| | 3: Intermittent, low production. | 3: High production, heavy use | | | | |
| | 4: Large hood or large air mass in motion | 4: Small hood-local control only | | | | |
| | Simple theory shows that air velocity falls rapidly with distance away from the opening of a simple extraction pipe. Velocity generally decreases with the square of distance from the extraction point (in simple cases). Therefore the air speed at the extraction point should be adjusted, accordingly, after reference to distance from the contaminating source. The air velocity at the extraction fan, for example, should be a minimum of 1-2 m/s (200-400 f/min) for extraction of solvents generated in a tank 2 meters distant from the extraction point. Other mechanical considerations, producing performance deficits within the extraction apparatus, make it essential that theoretical air velocities are multiplied by factors of 10 or more when extraction systems are installed or used. | | | | | |
| Individual protection measures, such as personal protective equipment | | | | | | |
| | Safety glasses with side shields. Chemical gaggles (AS/NIZS 1337.1, EN166 or patienal equivalent). | | | | | |

Chemical goggles. [AS/NZS 1337.1, EN166 or national equivalent]

Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59].

Eye and face protection

| Skin protection | See Hand protection below |
|-----------------------|--|
| Hands/feet protection | Wear chemical protective gloves, e.g. PVC. Wear safety footwear or safety gumboots, e.g. Rubber NDTE: The material may produce skin sensitisation in predisposed individuals. Care must be taken, when removing gloves and other protective equipment, to avoid all possible skin contact. Contaminated leather items, such as shoes, bells and watch-bands should be removed and destroyed. The selection of suitable gloves does not only depend on the material, but allso on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed molisturies ir scommended. Suitability and duration of contact, requency and duration of contact, chemical resistance of glove type is dependent on usage. Important factors in the selection of gloves include: requency and duration of contact, chemical resistance of glove material, glove thickness and edity Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent). When prothoged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 60 minutes according to 1874, AS/NZS 2161.1 or national equivalent) is recommended. S |
| Body protection | See Other protection below |
| Other protection | Overalls. Eyewash unit. Barrier cream. Skin cleansing cream. |

Respiratory protection

Type -P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

| Required Minimum Protection Factor | Half-Face Respirator | Full-Face Respirator | Powered Air Respirator |
|------------------------------------|----------------------|----------------------|------------------------|
| up to 10 x ES | P1 Air-line* | - | PAPR-P1 - |
| up to 50 x ES | Air-line** | P2 | PAPR-P2 |
| up to 100 x ES | - | P3 | - |
| | | Air-line* | - |
| 100+ x ES | - | Air-line** | PAPR-P3 |

* - Negative pressure demand ** - Continuous flow

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

· Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.

• The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).

Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.

Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program.

• Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU)

 \cdot Use approved positive flow mask if significant quantities of dust becomes airborne.

· Try to avoid creating dust conditions.

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

| Appearance | Not Available | | |
|--|---------------|--|----------------|
| Physical state | Solid | Relative density (Water = 1) | Not Available |

| Solubility in water | Not Available | pH as a solution (1%) | Not Available |
| Vapour density (Air = 1) | Not Available | VOC g/L | Not Available |

SECTION 10 Stability and reactivity

| Reactivity | See section 7 |
|-------------------------------------|--|
| Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| Possibility of hazardous reactions | See section 7 |
| Conditions to avoid | See section 7 |
| Incompatible materials | See section 7 |
| Hazardous decomposition products | See section 5 |

SECTION 11 Toxicological information

Information on toxicological effects

| Inhaled | The material is not thought to produce respiratory irritation (as classified by EC Directives using animal models). Nevertheless inhalation of dusts, or fumes, especially for prolonged periods, may produce respiratory discomfort and occasionally, distress. Inhalation of dusts, generated by the material during the course of normal handling, may produce severe damage to the health of the individual. Relatively small amounts absorbed from the lungs may prove fatal. |
|--------------|--|
| Ingestion | Accidental ingestion of the material may be seriously damaging to the health of the individual; animal experiments indicate that ingestion of less than 40 gram may be fatal. |
| Skin Contact | The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable gloves be used in an occupational setting. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. |
| Eye | This material can cause eye irritation and damage in some persons. |
| Chronic | Skin contact with the material is more likely to cause a sensitisation reaction in some persons compared to the general population. |

Sea transport (IMDG-Code / GGVSee)

| UN number | 2811 | | |
|---------------------------------|--|--|--|
| UN proper shipping name | TOXIC SOLID, ORGANIC, N.O.S. | | |
| Transport hazard class(es) | IMDG Class 6.1 IMDG Subrisk Not Applicable | | |
| Packing group | I | | |
| Environmental hazard | Marine Pollutant | | |
| Special precautions for user | EMS Number Special provisions Limited Quantities | | |

Inland waterways transport (ADN)

| UN number | 2811 | | | |
|---------------------------------|---------------------------|------------------------------|--|--|
| UN proper shipping name | TOXIC SOLID, ORGAN | TOXIC SOLID, ORGANIC, N.O.S. | | |
| Transport hazard class(es) | 6.1 Not Applicable | | | |
| Packing group | II | | | |
| Environmental hazard | Environmentally hazardous | | | |
| | Classification code | T2 | | |
| | Special provisions | 274; 614; 802 | | |
| Special precautions for user | Limited quantity | 500 g | | |
| 4301 | Equipment required | PP, EP | | |
| | Fire cones number | 2 | | |

Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

| Product name | Group |
|---------------------|---------------|
| 2,6-Dibromopyridine | Not Available |

Transport in bulk in accordance with the IGC Code

| Product name | Ship Type |
|---------------------|---------------|
| 2,6-Dibromopyridine | Not Available |

SECTION 15 Regulatory information

Safety, health and environmental regulations / legislation specific for the substance or mixture

2,6-Dibromopyridine is found on the following regulatory lists

Europe EC Inventory

European Union - European Inventory of Existing Commercial Chemical Substances (EINECS)

National Inventory Status

| National Inventory | Status | |
|--|--|--|
| Australia - AIIC / Australia Non-Industrial Use | Yes | |
| Canada - DSL | No (2,6-Dibromopyridine) | |
| Canada - NDSL | No (2,6-Dibromopyridine) | |
| China - IECSC | No (2,6-Dibromopyridine) | |
| Europe - EINEC / ELINCS / NLP | Yes | |
| Japan - ENCS | No (2,6-Dibromopyridine) | |
| Korea - KECI | No (2,6-Dibromopyridine) | |
| New Zealand - NZIoC | Yes | |
| Philippines - PICCS | Yes | |
| USA - TSCA | No (2,6-Dibromopyridine) | |
| Taiwan - TCSI | Yes | |
| Mexico - INSQ | No (2,6-Dibromopyridine) | |
| Vietnam - NCI | Yes | |
| Russia - FBEPH | Yes | |
| Legend: | Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration. | |

SECTION 16 Other information

| Revision Date | 06/07/2023 |
|---------------|------------|
| Initial Date | 07/07/2023 |

SDS Version Summary

| Version | Date of Update | Sections Updated |
|---------|-------------------|---|
| 1.2 | 06/07/2023 | Toxicological information - Acute Health (inhaled), Physical and chemical properties - Appearance, CAS Number, Toxicological information - Chronic Health, Hazards identification - Classification, Disposal considerations - Disposal, Exposure controls / personal protection - Engineering Control, Ecological Information - Environmental, Firefighting measures - Fire Fighter (extinguishing media), Firefighting measures - Fire Fighter (fire/explosion hazard), First Aid measures - First Aid (skin), First Aid measures - First Aid (swallowed), Composition / information on ingredients - Ingredients, Korean MSDS Number, Exposure controls / personal protection - Personal Protection (hands/feet), Identification of the substance / mixture and of the company / undertaking - Supplier Information, Identification of the substance / mixture and of the company / undertaking - Synonyms |

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

For detailed advice on Personal Protective Equipment, refer to the following EU CEN Standards:

EN 166 Personal eye-protection

EN 340 Protective clothing

- EN 374 Protective gloves against chemicals and micro-organisms
- EN 13832 Footwear protecting against chemicals
- EN 133 Respiratory protective devices

Definitions and abbreviations

PC - TWA: Permissible Concentration-Time Weighted Average

PC - STEL: Permissible Concentration-Short Term Exposure Limit

IARC: International Agency for Research on Cancer

ACGIH: American Conference of Governmental Industrial Hygienists

| STEL: Short Term Exposure Limit |
|---|
| TEEL: Temporary Emergency Exposure Limit。 |
| IDLH: Immediately Dangerous to Life or Health Concentrations |
| ES: Exposure Standard |
| OSF: Odour Safety Factor |
| NOAEL :No Observed Adverse Effect Level |
| LOAEL: Lowest Observed Adverse Effect Level |
| TLV: Threshold Limit Value |
| LOD: Limit Of Detection |
| OTV: Odour Threshold Value |
| BCF: BioConcentration Factors |
| BEI: Biological Exposure Index |
| AIIC: Australian Inventory of Industrial Chemicals |
| DSL: Domestic Substances List |
| NDSL: Non-Domestic Substances List |
| IECSC: Inventory of Existing Chemical Substance in China |
| EINECS: European INventory of Existing Commercial chemical Substances |
| ELINCS: European List of Notified Chemical Substances |
| NLP: No-Longer Polymers |
| ENCS: Existing and New Chemical Substances Inventory |
| KECI: Korea Existing Chemicals Inventory |
| NZIoC: New Zealand Inventory of Chemicals |
| PICCS: Philippine Inventory of Chemicals and Chemical Substances |
| TSCA: Toxic Substances Control Act |
| TCSI: Taiwan Chemical Substance Inventory |
| INSQ: Inventario Nacional de Sustancias Químicas |
| NCI: National Chemical Inventory |
| FBEPH: Russian Register of Potentially Hazardous Chemical and Biological Substances |

Classification and procedure used to derive the classification for mixtures according to Regulation (EC) 1272/2008 [CLP]

| Classification according to regulation (EC) No 1272/2008 [CLP] and amendments | Classification Procedure |
|---|--------------------------|
| Acute Toxicity (Oral) Category 2, H300 | Expert judgement |
| Hazardous to the Aquatic Environment Long-Term Hazard Category 2, H411 | Calculation method |
| Specific Target Organ Toxicity - Single Exposure (Respiratory Tract Irritation) Category 3, H335 | Expert judgement |
| Skin Corrosion/Irritation Category 2, H315 | Expert judgement |
| Serious Eye Damage/Eye Irritation Category 2, H319 | Expert judgement |
| Sensitisation (Skin) Category 1, H317 | Calculation method |
