# **SECTION 2 Hazards identification**

# Classification of the substance or mixture

Classification according to regulation (EC) No 1272/2008 [CLP] and amendments <sup>[1]</sup>

H314 - Skin Corrosion/Irritation Category 1B, H290 - Corrosive to Metals Category 1, H318 - Serious Eye Damage/Eye Irritation Category 1

| Legen          | 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI |
|----------------|--|
|                |  |
| Label elements |  |

| Hazard pictogram(s) |        |
|---------------------|--------|
|                     |        |
| Signal word         | Danger |

### Hazard statement(s)

| H314 | Causes severe skin burns and eye damage. |
|------|--|
| H290 | May be corrosive to metals.              |

#### Precautionary statement(s) Prevention

| P260 | Do not breathe mist/vapours/spray.   |  |
|------|--|--|
| P264 | Wash all exposed external body areas thoroughly after handling.                  |  |
| P280 | Wear protective gloves, protective clothing, eye protection and face protection. |  |
| P234 | Keep only in original packaging.   |  |

### Precautionary statement(s) Response

| P301+P330+P331 | IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.   |  |
|----------------|--|--|
| P303+P361+P353 | IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [or shower].                         |  |
| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |  |
| P310           | Immediately call a POISON CENTER/doctor/physician/first aider.   |  |
| P363           | Wash contaminated clothing before reuse.   |  |
| P390           | Absorb spillage to prevent material damage.  |  |
| P304+P340      | IF INHALED: Remove person to fresh air and keep comfortable for breathing.   |  |

### Precautionary statement(s) Storage

P405 Store locked up.

### Precautionary statement(s) Disposal

P501

Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

### **SECTION 3 Composition / information on ingredients**

### Substances

| CAS No       | %[weight] | Name  | Classification according to regulation (EC) No 1272/2008<br>[CLP] and amendments   | SCL /<br>M-Factor |

Legend: 1. Classified by Chemwatch; 2. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 3. Classification drawn from C&L; \* EU IOELVs available; [e] Substance identified as having endocrine disrupting properties

#### **Mixtures**

See section above for composition of Substances

### **SECTION 4 First aid measures**

#### Description of first aid measures

Eye Contact

- If this product comes in contact with the eyes:
- Immediately hold eyelids apart and flush the eye continuously with running water.
  - Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally

|              | <ul> <li>lifting the upper and lower lids.</li> <li>Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes.</li> <li>Transport to hospital or doctor without delay.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>  |
|--------------|---|
| Skin Contact | <ul> <li>If skin or hair contact occurs:</li> <li>Immediately flush body and clothes with large amounts of water, using safety shower if available.</li> <li>Quickly remove all contaminated clothing, including footwear.</li> <li>Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre.</li> <li>Transport to hospital, or doctor.</li> </ul>  |
| Inhalation   | <ul> <li>If fumes or combustion products are inhaled remove from contaminated area.</li> <li>Lay patient down. Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.</li> <li>Transport to hospital, or doctor, without delay.</li> <li>Inhalation of vapours or aerosols (mists, fumes) may cause lung oedema.</li> <li>Corrosive substances may cause lung damage (e.g. lung oedema, fluid in the lungs).</li> <li>As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested.</li> <li>Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered.</li> <li>This must definitely be left to a doctor or person authorised by him/her.</li> <li>(ICSC13719)</li> </ul> |
| Ingestion    | <ul> <li>For advice, contact a Poisons Information Centre or a doctor at once.</li> <li>Urgent hospital treatment is likely to be needed.</li> <li>If swallowed do NOT induce vomiting.</li> <li>If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.</li> <li>Observe the patient carefully.</li> <li>Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.</li> <li>Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.</li> <li>Transport to hospital or doctor without delay.</li> </ul>   |

### Indication of any immediate medical attention and special treatment needed

For acute or short term repeated exposures to strong acids:

- Airway problems may arise from laryngeal edema and inhalation exposure. Treat with 100% oxygen initially.
- Respiratory distress may require cricothyroidotomy if endotracheal intubation is contraindicated by excessive swelling
- Intravenous lines should be established immediately in all cases where there is evidence of circulatory compromise.
- Strong acids produce a coagulation necrosis characterised by formation of a coagulum (eschar) as a result of the dessicating action of the acid on proteins in specific tissues.

INGESTION:

- Immediate dilution (milk or water) within 30 minutes post ingestion is recommended.
- DO NOT attempt to neutralise the acid since exothermic reaction may extend the corrosive injury.
- Be careful to avoid further vomit since re-exposure of the mucosa to the acid is harmful. Limit fluids to one or two glasses in an adult.
- Charcoal has no place in acid management.
- Some authors suggest the use of lavage within 1 hour of ingestion.

SKIN:

- Skin lesions require copious saline irrigation. Treat chemical burns as thermal burns with non-adherent gauze and wrapping.
- Deep second-degree burns may benefit from topical silver sulfadiazine.

EYE:

- Eye injuries require retraction of the eyelids to ensure thorough irrigation of the conjuctival cul-de-sacs. Irrigation should last at least 20-30 minutes. DO NOT use neutralising agents or any other additives. Several litres of saline are required.
- Cycloplegic drops, (1% cyclopentolate for short-term use or 5% homatropine for longer term use) antibiotic drops, vasoconstrictive agents or artificial tears may be indicated dependent on the severity of the injury.
- Steroid eye drops should only be administered with the approval of a consulting ophthalmologist).

[Ellenhorn and Barceloux: Medical Toxicology]

### **SECTION 5 Firefighting measures**

#### Extinguishing media

- Foam.
- Dry chemical powder.
- ▶ BCF (where regulations permit).
- Carbon dioxide.
- Water spray or fog Large fires only.

### Special hazards arising from the substrate or mixture

| Fire Incompatibility | Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may<br>result |
|----------------------|---|
|----------------------|---|

### Advice for firefighters

| Fire Fighting         |   |
|-----------------------|---|
| Fire/Explosion Hazard | <ul> <li>Combustible.</li> <li>Slight fire hazard when exposed to heat or flame.</li> <li>Acids may react with metals to produce hydrogen, a highly flammable and explosive gas.</li> <li>Heating may cause expansion or decomposition leading to violent rupture of containers.</li> <li>May emit acrid smoke and corrosive fumes.</li> <li>Combustion products include:</li> <li>carbon monoxide (CO)</li> <li>carbon dioxide (CO2)</li> <li>other pyrolysis products typical of burning organic material.</li> </ul> |

### **SECTION 6 Accidental release measures**

### Personal precautions, protective equipment and emergency procedures

See section 8

### **Environmental precautions**

See section 12

### Methods and material for containment and cleaning up

Personal Protective Equipment advice is contained in Section 8 of the SDS.

### **SECTION 7 Handling and storage**

### Precautions for safe handling

| Safe handling | <ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>Avoid contact with moisture.</li> <li>Avoid contact with incompatible materials.</li> <li>When handling, DO NOT eat, drink or smoke.</li> <li>Keep containers securely sealed when not in use.</li> <li>Avoid physical damage to containers.</li> <li>Always wash hands with soap and water after handling.</li> <li>Work clothes should be laundered separately. Launder contaminated clothing before re-use.</li> <li>Use good occupational work practice.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> <li>Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions are maintained.</li> </ul> |
|---------------|--|
|---------------|--|

### Issue Date: 07/07/2023 Print Date: 07/07/2023

### 3,3,3-Trifluoropropane-1-sulphonyl chloride

| Other information | <ul> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>Store in a cool, dry, well-ventilated area.</li> <li>Store away from incompatible materials and foodstuff containers.</li> <li>Protect containers against physical damage and check regularly for leaks.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> </ul> |
|-------------------|---|
|-------------------|---|

# Conditions for safe storage, including any incompatibilities

| Suitable container      | <ul> <li>DO NOT use aluminium or galvanised containers</li> <li>Check regularly for spills and leaks</li> <li>Lined metal can, lined metal pail/ can.</li> <li>Plastic pail.</li> <li>Polyliner drum.</li> <li>Packing as recommended by manufacturer.</li> <li>Check all containers are clearly labelled and free from leaks.</li> <li>For low viscosity materials</li> <li>Drums and jerricans must be of the non-removable head type.</li> <li>Where a can is to be used as an inner package, the can must have a screwed enclosure.</li> <li>For materials with a viscosity of at least 2680 cSt. (23 deg. C) and solids (between 15 C deg. and 40 deg C.):</li> <li>Removable head packaging;</li> <li>Cans with friction closures and</li> <li>low pressure tubes and cartridges</li> <li>may be used.</li> <li>Where combination packages are used, and the inner packages are of glass, porcelain or stoneware, there must be sufficient inert cushioning material in contact with inner and outer packages unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic.</li> </ul> |
|-------------------------|--|
| Storage incompatibility | <ul> <li>Segregate from alkalies, oxidising agents and chemicals readily decomposed by acids, i.e. cyanides, sulfides, carbonates.</li> <li>Reacts with mild steel, galvanised steel / zinc producing hydrogen gas which may form an explosive mixture with air.</li> <li>Avoid strong bases.</li> <li>Air Sensitive</li> <li>Store at 2-8°C</li> <li>Moisture sensitive</li> <li>Store under argon</li> </ul>   |

### SECTION 8 Exposure controls / personal protection

### **Control parameters**

### Occupational Exposure Limits (OEL)

#### INGREDIENT DATA

#### Not Available

### Emergency Limits

| Ingredient                                      | TEEL-1        | TEEL-2        |               | TEEL-3        |
|---|---------------|---------------|---------------|---------------|
| 3,3,3-Trifluoropropane-<br>1-sulphonyl chloride | Not Available | Not Available |               | Not Available |
| Ingredient                                      | Original IDLH |               | Revised IDLH  |               |
| 3,3,3-Trifluoropropane-                         | Not Available |               | Not Available |               |

#### Occupational Exposure Banding

| The second se | 5  |                                     |
|---|--|-------------------------------------|
| Ingredient  | Occupational Exposure Band Rating  | Occupational Exposure Band Limit    |
| 3,3,3-Trifluoropropane-<br>1-sulphonyl chloride   | С  | > 1 to ≤ 10 parts per million (ppm) |
| Notes:  | Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's<br>potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure<br>band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health. |                                     |

### Exposure controls

| Appropriate engineering | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed           |
|-------------------------|--|
| controls                | engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to |

|  | provide this high level of protection.<br>The basic types of engineering controls are:<br>Process controls which involve changing the way a job activity or process is done to reduce the risk.<br>Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation<br>that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if<br>designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.<br>Employers may need to use multiple types of controls to prevent employee overexposure.  |  |  |
|--|---|--|--|
|  | Local exhaust ventilation usually required. If risk of overexposure exists, wear approved respirator. Correct fit is essential to obtain adequate protection. Supplied-air type respirator may be required in special circumstances. Correct fit is essential to ensure adequate protection.<br>An approved self contained breathing apparatus (SCBA) may be required in some situations.<br>Provide adequate ventilation in warehouse or closed storage area. Air contaminants generated in the workplace possess varying "escape" velocities which, in turn, determine the "capture velocities" of fresh circulating air required to effectively remove the contaminant.  |  |  |
|  | Type of Contaminant:  |  | Air Speed:   |
|  | solvent, vapours, degreasing etc., evaporating from tank  | ín still air).   | 0.25-0.5 m/s<br>(50-100 f/min.)  |
|  | aerosols, fumes from pouring operations, intermittent con welding, spray drift, plating acid fumes, pickling (released  |  | 0.5-1 m/s (100-200<br>f/min.)  |
|  | direct spray, spray painting in shallow booths, drum filling,<br>(active generation into zone of rapid air motion)  | , conveyer loading, crusher dusts, gas discharge   | 1-2.5 m/s (200-500<br>f/min.)  |
|  | grinding, abrasive blasting, tumbling, high speed wheel ge<br>into zone of very high rapid air motion).   | enerated dusts (released at high initial velocity  | 2.5-10 m/s<br>(500-2000 f/min.)  |
|  | Within each range the appropriate value depends on:   |  |  |
|  | Lower end of the range  | Upper end of the range   |  |
|  | 1: Room air currents minimal or favourable to capture   | 1: Disturbing room air currents  |  |
|  | 2: Contaminants of low toxicity or of nuisance value only.  | 2: Contaminants of high toxicity   |  |
|  | 3: Intermittent, low production.  | 3: High production, heavy use  |  |
|  | 4: Large hood or large air mass in motion   | 4: Small hood-local control only   |  |
|  | Simple theory shows that air velocity falls rapidly with dista<br>generally decreases with the square of distance from the e<br>extraction point should be adjusted, accordingly, after refer<br>extraction fan, for example, should be a minimum of 1-2 m<br>meters distant from the extraction point. Other mechanical<br>apparatus, make it essential that theoretical air velocities a<br>installed or used.  | xtraction point (in simple cases). Therefore the a<br>ence to distance from the contaminating source.<br>/s (200-400 f/min) for extraction of solvents gene<br>considerations, producing performance deficits of | ir speed at the<br>The air velocity at the<br>rated in a tank 2<br>within the extraction |
| Individual protection<br>measures, such as<br>personal protective<br>equipment |   |  |  |
| Eye and face protection  | <ul> <li>Chemical goggles. [AS/NZS 1337.1, EN166 or national equivalent]</li> <li>Full face shield may be required for supplementary but never for primary protection of eyes.</li> <li>Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59].</li> </ul> |  |  |
| Skin protection  | See Hand protection below   |  |  |
| Hands/feet protection  | <ul> <li>Wear chemical protective gloves, e.g. PVC.</li> <li>Wear safety footwear or safety gumboots, e.g. Rubber</li> <li>When handling corrosive liquids, wear trousers or overalls outside of boots, to avoid spills entering boots.</li> </ul>  |  |  |
| Body protection  | See Other protection below  |  |  |
|  | • Overalls.   |  |  |

PVC Apron.

Eyewash unit.

Other protection

PVC protective suit may be required if exposure severe.

• Ensure there is ready access to a safety shower.

### **Respiratory protection**

Type AB Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Selection of the Class and Type of respirator will depend upon the level of breathing zone contaminant and the chemical nature of the contaminant. Protection Factors (defined as the ratio of contaminant outside and inside the mask) may also be important.

| Required minimum protection factor | Maximum gas/vapour concentration present in air p.p.m. (by volume) | Half-face<br>Respirator | Full-Face<br>Respirator |
|------------------------------------|--|-------------------------|-------------------------|
| up to 10                           | 1000   | AB-AUS / Class1         | -                       |
| up to 50                           | 1000   | -                       | AB-AUS / Class 1        |
| up to 50                           | 5000   | Airline *               | -                       |
| up to 100                          | 5000   | -                       | AB-2                    |
| up to 100                          | 10000  | -                       | AB-3                    |
| 100+                               |  |                         | Airline**               |

\* - Continuous Flow \*\* - Continuous-flow or positive pressure demand

A(AII classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

+ Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.

- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

### **SECTION 9** Physical and chemical properties

#### Information on basic physical and chemical properties

| Appearance                                      | Not Available |  |               |

### **SECTION 11 Toxicological information**

### Information on toxicological effects

| Inhaled      | The material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage.<br>Corrosive acids can cause irritation of the respiratory tract, with coughing, choking and mucous membrane damage. There may be dizziness, headache, nausea and weakness.<br>The material has <b>NOT</b> been classified by EC Directives or other classification systems as "harmful by inhalation". This is because of the lack of corroborating animal or human evidence.   |
|--------------|---|
| Ingestion    | The material can produce chemical burns within the oral cavity and gastrointestinal tract following ingestion.<br>The material has <b>NOT</b> been classified by EC Directives or other classification systems as "harmful by ingestion". This is because<br>of the lack of corroborating animal or human evidence.   |
| Skin Contact | The material can produce chemical burns following direct contact with the skin.<br>Skin contact is not thought to have harmful health effects (as classified under EC Directives); the material may still produce<br>health damage following entry through wounds, lesions or abrasions.<br>Open cuts, abraded or irritated skin should not be exposed to this material<br>Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects.<br>Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. |
| Eye          | The material can produce chemical burns to the eye following direct contact. Vapours or mists may be extremely irritating. If applied to the eyes, this material causes severe eye damage.  |
| Chronic      | Long-term exposure to respiratory irritants may result in airways disease, involving difficulty breathing and related whole-body problems.<br>Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure.<br>Repeated or prolonged exposure to acids may result in the erosion of teeth, swelling and/or ulceration of mouth lining. Irritation of airways to lung, with cough, and inflammation of lung tissue often occurs.  |
|              |   |
| Legend:      | <ol> <li>Value obtained from Europe ECHA Registered Substances - Acute toxicity 2. Value obtained from manufacturer's SDS.<br/>Unless otherwise specified data extracted from RTECS - Register of Toxic Effect of chemical Substances</li> </ol>  |

Asthma-like symptoms may continue for months or even years after exposure to the material ends. This may be due to a non-allergic condition known as reactive airways dysfunction syndrome (RADS) which can occur after exposure to high levels of highly irritating compound. Main criteria for diagnosing RADS include the absence of previous airways disease in a non-atopic individual, with sudden onset of persistent asthma-like symptoms within minutes to hours of a documented exposure to the irritant. Other criteria for diagnosis of RADS include a reversible airflow pattern on lung function tests, moderate to severe bronchial hyperreactivity on methacholine challenge testing, and the lack of minimal lymphocytic inflammation, without eosinophilia. RADS (or asthma) following an irritating inhalation is an infrequent disorder with rates related to the concentration of and duration of exposure to the irritating substance. On the other hand, industrial bronchitis is a disorder that occurs as a result of exposure due to high concentrations of irritating substance (often particles) and is completely reversible after exposure ceases. The disorder is characterized by difficulty breathing, cough and mucus production.
